

# flor

flor is the world's only  
flexible propagating vase

transition any cutting from  
water to soil & watch your  
garden flourish!

here are some ideas to  
get started:

green onions  
avocado pits  
romaine hearts  
pothos  
sansevieria  
snake plant

transplant your plant to  
your garden, or let it keep  
flourishing in the vase!

to transition your plant to  
soil, fill vase with wet dirt.  
unplug the drain when soil  
has dried

4

gather a clipping from  
your favorite plant (cut  
right below a leaf node!)

1

fill vase with room temp  
water & submerge the cut  
end, using snake clips to  
support the leaf or stem

2

drain the water regularly  
to give your plant fresh  
oxygen
